

xml\_node\_struct

xml\_allocator

xml\_document\_struct

```
graph BT; xml_document_struct --> xml_node_struct; xml_document_struct --> xml_allocator;
```

The diagram illustrates a structural relationship where `xml_document_struct` is the base or parent structure, and `xml_node_struct` and `xml_allocator` are derived or associated structures. A horizontal line with upward-pointing arrows at both ends connects the two top boxes, and a vertical line descends from its center to the bottom box.
